# Fifth Population and Housing Census Aruba

Selected Tables

## *Preface*

Development is about improving the lives of people. Policy and fiscal decisions should rely on data that answer who these people are, where and how they live, and how their lives are changing. The demographic and related data that answer these questions are essential to policymakers and development planners across nearly every sector of our society.

The fundamental purpose of the population and housing census is to provide actual, accurate and complete facts for planning and policy-making purposes. The census is unique because it is the only source of detailed socio-economic, demographic data at small geographic areas including neighborhoods and communities. It is the only body of comprehensive sub-provincial statistical data on population, housing and hard-to reach/special population groups such as seniors, persons with disabilities and migrants.

The Central Bureau of Statistics Aruba is proud to present on its 25<sup>th</sup> anniversary, the results of the Fifth Population and Housing Census. The census was financed by the FDA and coordinated and analyzed by the Central Bureau of Statistics. A host of persons contributed in various ways to the successful outcome of this major undertaking. We thank the enumerators and supervisors who labored to collect the information that is presented in this publication.

The census team overcame numerous challenges along the way to this final product. Mrs. Monique Plaza-Maduro, BSc. was appointed as census commissioner and was assisted by the census team, consisting of the following persons: Mrs. D.I. Thodé-Helder, Ph.D, Mrs. Drs S. Geerman, Mrs. Drs. G.J. Arendsz, Mrs. Drs. K.J. Peterson-Kock, Mrs. Drs. M.R. Vigelandzoon, Mrs. Drs. Y. Pourrier, Mrs. M.J. van der Biezen-Marques, BSc., Mrs. Y. C. J. Figaroa-Kelly, Mr. H. de Cuba, Mr. J.F.M. Esser, M.Sc., Mr. M.T. Giel, Mr. R. Derix, Ph.D, Mr. R.E. Werleman and Mr. R.J.C. van der Biezen.

The census team was for a prolonged period assisted by other personnel of the CBS, involved in training sessions, logistics, fieldwork guidance and control, editing and coding. Technical assistance for the Population and Housing Census was provided by the Netherlands Interdisciplinary Demographic Institute (NIDI), in the person of dr. F.C.H. Eelens, who acted as senior census advisor.

Thanks to the commitment of all persons working at the CBS, the fifth population and housing census can be considered as a successful undertaking. This publication presents the results of the 2010 Population and Housing Census. We are confident that information on the size, distribution and characteristics of our population will serve for developing sound policies and programmes aimed at fostering the welfare of Aruba and its inhabitants.

Further in-depth analysis about social-economic and demographic issues will be published shortly, highlighting emerging trends and future challenges. We hope that they will play an indispensable catalytic role in fruitful policy debates, optimize planning processes and consolidate the foundation of our country.

Table P-C2.	Aruban- and foreign-born population by age, sex and marital status....	95
Table P-C3.	Aruban- and foreign-born population by place of residence and sex....	97
Table P-C4.	Aruban- and foreign-born population by Dutch or other nationality, sex and (for foreign-born population) duration of settlement in Aruba (years).....	99
Table P-C5.	Foreign-born population by Dutch or other nationality, duration of settlement in Aruba, age, and sex.....	100
Table P-C6.	Foreign-born population by country or region of birth, age and sex.....	101
Table P-C7.	Foreign-born population by age and period of most recent settlement in Aruba.....	105
Table P-C8.	Foreign-born population by period of most recent settlement in Aruba and by country or region of birth.....	107

Table P-C9.	Aruban- and foreign born population by country of birth father and mother and sex.....	109
D. Tables dealing with languages spoken in the households		
Table P-D1.	Population by language most spoken in the household by age and sex	110
Table P-D2.	Population by language most spoken in the household by place of residence and sex	111
Table P-D3.	Population by language most spoken in the household, by region of residence, age and sex	115
E. Tables dealing with health aspects of the population		
Table P-E1.	Persons with limitations by type of limitation, age and sex	123
Table P-E2.	Number of persons with limitations by type and size of households	124
Table P-E3.	Population with limitation by age, sex and type of household	125
Table P-E4.	Number of persons who need help due to a physical or mental limitation, by type(s) of help received, age and sex	127
Table P-E5.	Number of persons who need help due to a physical or mental limitation, by type(s) of difficulty, age and sex and whether help received	128
F. Tables dealing with educational characteristics of the population		
Table P-F1.	School-attending population by age and sex	129
Table P-F2.	School-attending population by region of residence, age and sex	130
Table P-F3.	School-attending population by ISCED level of program, age and sex	131
Table P-F4.	School-attending population by region of residence, region of school and ISCED level of program	132
Table P-F5.	School-attending population by ISCED level of program, language most spoken, and sex	134
Table P-F6.	Population not attending school 14 years of age and over by age, sex and level of educational attainment	135
Table P-F7.	Aruban-born population not attending school 14 years of age and over by country or region of study and level of educational attainment	136

Table P-F8.	Foreign-born population not attending school 14 years of age and over by country or region of study and level of educational attainment	138
Table P-F9	Literate/illiterate population by region of residence, age and sex	140
G. Tables dealing with the marital status of the population		
Table P-G1.	Population by marital status, age and sex	142
Table P-G2.	Persons 14 years of age and over living together on a durable basis, married or not married to their partner, by marital status, age and sex	143
H. Tables on the fertility of the female population		
Table P-H1.	Female population 14 years of age and over by age and number of children ever born	145
Table P-H2.	Female population 14 years of age and over by age, marital status, and number of children ever born	146
Table P-H3.	Female population 14 years of age and over by (ISCED level of) education attained, age of female and number of children ever born	149
Table P-H4.	Aruban-born and foreign-born female population 14 years of age and over, by age of female, and age at birth of first child	155
I. Tables dealing with the economic activity of the population		
Table P-I1	Population 14 years of age and over by activity status, age, and sex	157
Table P-I2	Population 14 years of age and over by place of residence and activity status	158
Table P-I3	Population 14 years of age and over by activity status, age, sex, and marital status	161
Table P-I4.	Population 14 years of age and over by activity status and country of nationality (and for Dutch nationals by country of birth)	169
Table P-I5.	Foreign-born population 14 years of age and over by activity status, Dutch or other nationality, sex, and duration of settlement in Aruba (years)	171
Table P-I6.	Employed population by branch of industry (ISIC major division), age, and sex	173

Table P-I7.	Employed population, attending or not attending regular school by branch of industry (ISIC major division) and level of education	175
Table P-I8.	Employed population by major occupational group (ISCO major group), age and sex	177
Table P-I9.	Employed population, attending or not attending regular school by (ISCO) major occupational group and level of education	179
Table P-I10.	Employed population by sex and place of work	180
Table P-I11.	Employed population by economic sector, age and sex	182
Table P-I12.	Employed population, attending or not attending school, by economic sector and level of education	183
Table P-I13.	Employed population by status in employment, age and sex	184
J.	Tables on the income distribution of the population	
Table P-J1.	Employed population 14 years of age and over by age, sex, and gross monthly income from main job	185
Table P-J2.	Employed population 14 years of age and over by region of residence and by gross monthly income from main job	186
Table P-J3.	Population 14 years of age and over by sex, gross monthly income, and activity status	187
Table P-J4.	Population 14 years of age and over by gross monthly income and main source of income	189
Table P-J5.	Employed population 14 years of age and over by gross monthly income from main job, level of educational attainment and sex	191
Table P-J6.	Employed population by gross monthly income from main occupation and branch of industry (ISIC major division)	194
Table P-J7.	Employed population by gross monthly income from main occupation and major occupational group (ISCO major group)	194

## Housing Tables

### A. Tables on the type of living quarters

Table H-A1.	Households and population in households by type of living quarters	197
-------------	--	-----

Table H-A2.	Households and population in households by type and location of the living quarters	198
Table H-A3.	Non-collective households occupying housing units by type and location of the housing unit	200
Table H-A4.	Population occupying non-collective housing units by type and location of the housing unit	203
B.	Tables with general characteristics of living quarters	
Table H-B1.	Households occupying non-collective housing units by type of housing unit, tenure of household and, for tenant households, ownership of housing unit occupied	206
Table H-B2	Population occupying non-collective housing units by type of housing unit, tenure of household and, for tenant households, ownership of housing unit occupied	207
Table H-B3.	Non-collective housing units by location of the housing unit, tenure of household and, for tenant households, ownership of housing unit occupied	208
Table H-B4.	Rented housing units by rent paid and type of owner	210
Table H-B5.	Rented housing units by rent paid, tenure of household, and number of rooms	211
Table H-B6.	Housing units by location and period of construction	213
Table H-B7.	Housing units by type, period of construction, and type of owner	215
Table H-B8.	Housing units by tenure of household, type of housing unit, and number of rooms	216
Table H-B9.	Living quarters by location and kitchen facilities	217
Table H-B10.	Housing units by type, total plot area, and number of rooms	219
Table H-B11.	Housing units by period of construction, number of stories of the building in which the housing unit is situated, and number of rooms	222
Table H-B12.	Housing units by type, number of conjugal family nuclei, and number of rooms	223
Table H-B13.	Housing units by type, number of occupants, and number of rooms	224
Table H-B14.	Housing units by type, number of occupants, and number of bedrooms	226

C.	Tables on some construction aspects of living quarters	
Table H-C1.	Housing units by construction material of exterior walls, roofing material, and type of housing unit	228
Table H-C2.	Housing units by construction material of exterior walls, roofing material, and period of construction	230
Table H-C3.	Households and population occupying housing units by quality of construction of the housing unit, type of housing unit, and period of construction of the housing unit	232
Table H-C4.	Households and population occupying housing units by quality of construction of the housing unit, type of owner of the housing unit, and period of construction of the housing unit	236
Table H-C5.	Households and population occupying housing units by tenure of household and quality of construction of the housing unit	238
Table H-C6.	Housing units by construction material of exterior walls, roofing material, and quality of construction of the housing unit	239
Table H-C7.	Housing units by place of residence and bars placed on windows	241
Table H-C8.	Housing units by type, place of residence, with a swimming pool on the premises	243
Table H-C9.	Housing units by type, place of residence, and building being used for business	245
D.	Tables dealing with sanitary facilities of the living quarters	
Table H-D1.	Housing units by number of bathrooms/number of toilets, type of housing unit, and period of construction of the housing unit	249
Table H-D2.	Housing units by number of toilets, type of toilet waste disposal, and period of construction of the housing unit	251
Table H-D3.	Housing units by location and water usage	252
E.	Tables dealing with car ownership of occupants of the living quarters	
Table H-E1.	Number of automobiles by location of the living quarters to which they belong	255
Table H-E2.	Housing units by number of automobiles and location of the housing unit	257

F.	Tables dealing with goods, facilities and inconveniences around the living quarters	
Table H-F1.	Housing units by location and availability of connections	259
Table H-F2.	Households and population occupying housing units by location and type of internet connection	261
Table H-F3.	Housing units by location and inconveniences in the neighborhood of the living quarter	263
Table H-F4.	Housing units by location and availability of commodities	265

# Highlights

# A. Organization and Execution of the 2010 Census

## *Organization of the enumeration process*

Organizing a Population and Housing Census is a difficult task to complete and most certainly when in one week's time all housing units on Aruba have to be visited. For practical purposes, Aruba was therefore divided into 56 enumeration districts and 1068 enumeration areas (EA). Enumerators were assigned an EA each and were in charge of visiting all housing units in that enumeration EA, some 29 to 35 housing units per enumeration area.

Each enumeration area was supervised by a head enumerator and an assistant. The head enumerator was in charge of all the Census activities within his enumeration area, including the daily supervision of the progress made by the enumerators, and the daily checking for errors and inconsistencies in the forms completed by the enumerators. Head enumerators and their assistants were mostly head of schools and teachers who coordinated their Census activities from their school buildings that, for the duration of the Census week, were transformed into Census District Offices.

Enumerators were selected on a number of criteria which were, among others, level of education, ability to perform a full time job during the Census week, and past experience with Census taking or with other surveys conducted by the Central Bureau of Statistics. Of the enumerators selected, nearly 50% were teachers and other public servants, who were exempted from duty for the duration of the Census week, with retention of pay.

## *Research method*

During the 2010 Census, two different methods of data collection were used. Census data were collected by means of a 'short' questionnaire completed on paper, and a 'long' questionnaire completed on a Triple E netbook (hand held computer). The paper and digital questionnaires were almost identical, with the exception that the digital questionnaire included 30 extra questions compared to the paper one. The paper questionnaire was completed in the majority of the enumeration area (in 998 out of 1068 enumeration blocks), whereas netbooks were used for data collection in 70 EAs. A systematic sample was drawn out of the pool of enumeration areas. In each enumeration district at least one enumeration area was canvassed by means of a digital questionnaire.

In developing the paper and digital questionnaires, three important factors were considered. Firstly, the questions had to conform to the 'Principles and Recommendations for Population and Housing Censuses, 2008', as described by the Department of Economic and Social Affairs, Statistical Division, United Nations. Secondly, the questions had to reflect as much as possible the areas of interest of important local Census data users from both the public and the private sector, who were consulted prior to the development of the questionnaires. Thirdly, the comparability with the previous Censuses had to be maintained as much as possible. Taking these factors into account, a large number of questions of the 2000 Census questionnaire were incorporated into the 2010 Census questionnaires, and new questions were added to tailor the information needs of Census data users and to conform to new recommendations issued by the United Nations.

Both the paper and the digital questionnaires consisted of 3 different forms:

- a household form,
- a housing form,
- and a person form.

The household form was the first form to be completed and included questions on: age, gender, country of birth, nationality, family ties between household members, marital status.. The housing form included questions on the characteristics of the living quarter, e.g. the type of living quarter, the ownership of the living quarter, the presence of basic facilities in the living quarter, the building materials used in the construction of the living quarter, the state of repair of the living quarter, etcetera. Then, the person form was completed for each individual and included questions relating to the following subjects:

- |                            |   |   |
|----------------------------|---|---|
| - General information      | } | these questions were completed for all individuals of all ages  |
| - Family ties              |   |   |
| - Migration                |   |   |
| - Language                 | } | this question was completed in part for all individuals of all ages and in part for individuals 5 years and older |
| - Health                   |   |   |
| - Schooling                | } | these questions were completed for all individuals 14 years and older   |
| - Marital status           |   |   |
| - Fertility                |   |   |
| - Economic characteristics |   |   |
| - Income                   |   |   |

The digital person form included additional questions on:

- |                               |  |
|-------------------------------|--|
| - Migration                   | (completed for individuals born on Aruba)                                  |
| - Marital status              | (completed for individuals 14 years and older)                             |
| - Caregiving                  | (completed for individuals 16 years and older)                             |
| - Health                      | (completed for all individuals of all ages)                                |
| - Transportation              | (completed for individuals attending a school and/or employed individuals) |
| - Caretaking responsibilities | (completed for individuals 30 years and older who do not live alone)       |
| - Employment                  | (completed for individuals 14 years and older)                             |
| - Volunteer work              | (completed for individuals 14 years and older)                             |

Tables on the additional questions included in the digital questionnaire can be found in a second publication of Census tables. A copy of the paper questionnaire is included in Appendix 1.

## *Pilot Census*

A pilot Census was conducted from April 15 to April 20, 2010. During the pilot Census every aspect of the Census was tested, including the technical aspects of the different instruments to be used during the actual Census, and the level of logistic and operational efficiency. Thus, the questionnaires were tested, as well as the training programs for all those involved, the instruction manuals, the data editing process, the coding of the data, the programs used to produce the tables, etcetera. Based on information gathered during the pilot Census, some changes were made in the questionnaires and in the training program for the enumerators. In addition, the pilot Census provided important field experience for the enumerators who were to act as head enumerators during the Census week.

## *Training of Census personnel*

All personnel involved in the Census, including staff of the Central Bureau of Statistics, were trained well in advance to ensure an optimal functioning during the Census week. Enumerators were trained on the contents of the questionnaire and the procedures to be followed during the Census week. Enumerators using the netbooks were trained separately. They received information on the contents of the more detailed digital questionnaire and were instructed how to use the netbooks as a data entry device and an interviewing tool. Head enumerators and assistants received additional training on administrative procedures to be conducted at their Census District Offices. CBS personnel were in charge of all training sessions, and trained some 1200 individuals. After the training sessions, the PowerPoint presentation used to instruct the enumerators was made available through the 2010 Census website ([www.censo2010.aw](http://www.censo2010.aw)) for everyone who wanted extra information on the questionnaires and procedures to be followed during the Census week.

## *Geographical tools*

To ensure an optimal enumeration of all living quarters on Aruba, enumerators were provided with recently updated maps of their enumeration area, created by means of the Geographical Information System (GIS) of the Central Bureau of Statistics. Enumerators were instructed to visit all living quarters on the map of their enumeration area and also all other living quarters they encountered in the field that were not on the map. Enumerators had to add the latter to the map and make corrections where necessary. This information was used to further update the CBS GIS. In each Census District Office, a detailed map of that entire enumeration area was displayed. Head enumerators and their assistant were encouraged to explore their enumeration area before the start of the Census week.

Another important tool used for the analyses of the Census data was the Geographical Address Classification (GAC). The GAC divides Aruba in 8 regions and each region is further divided into zones, and then into streets. A one-digit code is assigned to regions, a two-digit code to zones, and a five-digit code to streets (for more information see: Geographic Address Classification Aruba, CBS, 2006). The GAC was used to geographically depict the data gathered during the Census.

## *Fieldwork*

The Census week started on the midnight of September 29 (Census moment), and ended October 6, 2010. Enumerators were instructed to present at their respective Census District Office at 8 o'clock in the morning of September 29, to receive final instructions from the head enumerator, and collect their enumeration material. All enumerators were provided with a badge and an aqua blue Census polo shirt worn by all Census personnel during the Census week. Actual enumeration activities started on the morning of September 29.

During the Census week, all enumeration activities were coordinated via the Census District Offices. Head enumerators and their assistants were in charge of closely monitoring the progress of the enumeration activities and conducting error checks in the forms completed by the enumerators. They were guided by eight fieldwork teams, consisting of CBS personnel, which made daily visits to each Census District Office. Head enumerators and CBS fieldwork teams were equipped with cellular phones to enhance the communication between the Census District Offices and the CBS and to assist the fieldwork teams in their problem solving tasks.

Before the start of the Census an extensive publicity campaign was held to inform the public about the importance of cooperating with the Census. In April 2010, to mark the official start of the 2010 Census activities, a website was launched with extensive information on the Census. In addition, a Facebook account was created where individuals could receive regular updates and comment on all aspects of the Census. Furthermore, a private company was hired to conduct an extensive publicity campaign through the media. The public was kept informed via newspaper articles and advertisements and appearances of CBS personnel in television and radio programs and news items. In addition, Census jingles were broadcasted via a wide range of radio stations and commercials were aired on a large number of television channels and, for the duration of the Census week, were shown before the start of every movie played in the theaters. The publicity campaign also included the placement of posters, banners and flags on key locations on Aruba and the distribution of Census pens and informative folders on heavily trafficked roads by individuals carrying 'A-Frame' signs with information on the Census.

During the Census week, a total of 89,032 individuals were enumerated in 30,340 households. Due to some organizational issues, including the fact that the CBS wanted to recruit as many school teachers as possible to function as Census enumerators, head enumerators and assistants, the 2010 Census week coincided, in part, with an autumn school holiday when many inhabitants leave Aruba for vacation.

## *Post-Census enumeration*

During the Census week, enumerators had to complete three forms to keep track of the progress they made with the enumeration of the households in their enumeration area. On the first form, enumerators had to write down the addresses of the households they had successfully enumerated, and the number of individuals they had interviewed in each household. On the second form, enumerators were instructed to write down the addresses that were not to be enumerated because

they were, for example, inhabited. On the third form, enumerators wrote down the addresses of those households that were not enumerated during the Census week, either because household members were never found at home or because they refused participation. These households had to be revisited during the Post-Census enumeration period.

Post-Census enumerators were chosen on the basis of their performance during the Census week. To facilitate their work, Post-Census enumerators were handed over a copy of all three abovementioned forms and a map of the households that had to be revisited during the Post-Census enumeration period. CBS personnel were in charge of monitoring the progress made by the Post-Census enumerators.

The Post-Census enumeration period lasted 6 weeks, starting October 26, and ending December 6. In total, 1,884 households were successfully enumerated, accounting for 4,725 individuals, whereas 394 households refused to cooperate and 1,055 households could still not be reached.

### *Coding and data processing*

Data collection occurred in the same manner as in the 2000 Census. The Census forms were scanned and a combination of optical mark reading, optical character recognition, and imaging was used to capture the data. To verify the scanned information, a team of 16 Census enumerators were hired. In addition, CBS personnel specialized in collecting and disseminating data on education, employment, cartography, and branch of industry were in charge of coding the information gathered on these topics. Computer aided coding was used to facilitate the coding process. Digital information from the netbooks was immediately coded, edited and brought together in a national data file. On the occasion of World Statistics Day (20-10-2010), a mere three weeks after the census, the first preliminary results of the census were presented to the general public.

Data was then extensively edited by means of the Census and Survey Processing System (CSPro), developed by the US Census Bureau. Long before the start of the Census, editing programs were written in CSPro to detect structure errors, inconsistencies, and non-valid values. Errors were then, in part automatically, and in part manually corrected using a data entry program written in CSPro. Tables were constructed using CSPRO. Data was then transferred to SPSS (Statistical Package for the Social Sciences). All tables were double check using SPSS and more specialized analyses were conducted.

### *Updating the Population Register*

The Population Count Ordinance (published in September 2007; AB 1990, GT 10) stipulates that, during a Census, data must be collected to help update the Population Register of Aruba. Therefore, the address, names, dates of births, and gender of all enumerated individuals were completed on a separate form. After the Census, these forms were turned over to the Bureau of Civil Registration.

## *Privacy*

The privacy of those enumerated is protected by law. All those involved in collecting and processing Census data are bound to strict legal rules of secrecy contained in the Population Count Ordinance. Those who violate these rules will be prosecuted and can be sentenced to prison or receive a substantial fine. To protect everyone against misuse of their personal information, a number of practical steps were taken. Immediately after the Census, the forms containing the name, address, date of birth and gender of enumerated individuals, were separated from the other Census questionnaires, making the further handling of the information collected during the Census completely anonymous. Furthermore, the use of scanning and direct processing of data via computers helped reduce the number of times CBS personnel handled the documents. The dissemination of data collected during the Census will also be very restricted. The data will be published in such an aggregated manner that no individual information will be distinguished.

## B. The scope of the 2010 Census

## *Units of enumeration*

In the Census, four units of enumeration can be distinguished:

- the person,
- the family nucleus
- the household, and
- the living quarter

Each unit will be discussed in detail in the following sections.

### *Person*

As was the case in previous Censuses, the 2010 Population and Housing Census was a ‘de jure’ enumeration. Only persons having their usual residence on Aruba were counted. The population figures included in the Census tables is thus a reflection of the ‘de jure’ population. This is in contrast with de ‘de facto’ population, which represents all individuals present in a country at a certain moment in time.

Persons with usual residence on Aruba are:

- persons who, at the time of the Census, had been living on Aruba for one year or longer, and
- persons who, at the time of the Census, had been living on Aruba for less than one year, but who had the intention to remain on the island for one year or longer.

Excluded from the Population Census were thus:

- tourists and other individuals visiting Aruba for a period of less than one year,
- Arubans living abroad, including those studying abroad,
- Dutch marines staying on Aruba for less than one year,
- those imprisoned in the correctional institute of Aruba whose total length of stay on the island, including the length of their prison sentence, does not exceed one year.

### *Family nucleus*

Within a household, several social links between people can exist. Family or biological ties and sexual relationships govern these links. Legal or consensual bonds can join persons within a household, thus forming a family nucleus. For the study of family nuclei within the household, two general approaches exist: the formal approach and the sociological approach. The approach to be followed depends on the research objectives of the user of the Census data. The enumeration strategy used during the Census allows the classification of the data according to both approaches.

### A. Formal approach

The formal approach examines the legal bonds that group individuals together in conjugal families. Only legal bonds through marriage, blood, or adoption are considered. A *conjugal family nucleus* consists of one of the following types:

- a *legally married* couple without children,
- a *legally married* couple with never-married children (biological or adopted),
- a father with one or more never-married children (biological or adopted),
- a mother with one or more never-married children (biological or adopted).

### B. Sociological approach

In the sociological approach, both legal and consensual bonds between individuals within the household are considered. Here, the concept of sociological family nucleus is used. This type of family consists of both legally married individuals (with or without children) as well as persons who are living together on a durable basis, without being married to each other (again with or without children).

The following categories of sociological family nuclei are distinguished:

1. *Conjugal family nucleus*: this type includes the same categories as indicated above. However, the conjugal family formed by a single-parent, as mentioned in the 'formal approach', who lives together with a partner to whom he or she is not married is not included in this category of sociological family nucleus. The nucleus formed by a single-parent, the partner, and the child(ren) is included in the group below.
2. *Consensual family nucleus* consists of one of the following types:
  - a couple, not married to each other, without children, and living together on a durable basis, or
  - a couple, not married to each other, with children (biological or adopted), and living together on a durable basis; the children of the couple should be never-married and not living together with a partner.

### C. Unattached persons

An unattached person is defined as someone who lives in the household but does not form part of a family nucleus. In fact, depending on which approach is adopted, a more specific definition can be given of an unattached person:

#### *Formal approach:*

An unattached person is someone with no spouse and no never-married children in the household. An unattached person does not belong to any of the types of conjugal family nuclei mentioned in the 'formal approach'.

### *Sociological approach:*

An unattached person in this approach has the same characteristics as in the 'formal approach'. In addition, the person should not be living together, on a durable basis, with a partner and should not have children in the same household who are living together with a partner.

## *Household*

During a Census, it is very important to determine whether individuals occupying the same living quarter also belong to the same household. An essential criterion is whether these individuals have made common arrangements for their subsistence, including arrangements for food and other essentials. In addition, it is important to determine whether these individuals share a common room in the living quarter (a living room, dining room, kitchen, etc.), and/or share their meals. For example, a live-in housemaid sometimes belongs to the household where she works, and sometimes not. It all depends on whether or not the live-in housemaid, after her daily work, can retire to her own living quarters, where she separately, and independently can spend her spare time (e.g. watch television, eat a meal, etc.).

A household may either be:

- a one-person household, i.e. a person who makes provision for his/her own food or other essentials for living, without combining with any other person to form part of a multi-person household, or
- a multi-person household, i.e. a group of two or more persons living together who make common provision for food or other essential for living.

Households are classified by type, according to the number of family nuclei and unattached persons they comprise. The relationships, if any, among the members of the household are also taken into account. Contrary to the 2000 Census, where the enumerator was in charge of the difficult task of determining the household type, the 2010 Census questionnaire included a special set of simple questions that were used by a computer program to determine the household type.

The type of household, as presented in the tables, is based on conjugal nuclei and unattached persons, using the 'formal approach'. Consensual family nuclei are not used in the classification of the household by type. Four types of households can be distinguished:

### *A. Collective household*

A collective household is defined as a household of more than ten persons without any family relation to each other. Often these individuals can be found in institutions, such as homes for the elderly, orphanages, prisons, etc.

## B. *Non-collective household*

- a. *One person household*
- b. *Nuclear household*, defines as a household consisting of a single conjugal family nucleus
- c. *Extended household*, consisting of persons related to each other, but not comprising a nuclear household. An extended household is further subdivided into the following categories:
  - c1. One family nucleus and other persons
  - c2. Two or more family nuclei and other persons
  - c3. Two or more family nuclei without other persons
- d. *Composite household*, consisting of persons not all related to each other. A composite household is further subdivided into the following categories:
  - d1. One family nucleus and other persons
  - d2. Two or more family nuclei and other persons
  - d3. Two or more family nuclei without other persons

## A. *Homeless household*

A homeless household is defined as a household without shelter that would fall within the scope of living quarters as defined in the next section. These persons carry their few possessions with them, live and sleep in the streets or in any other space on a more or less random basis. In any Population Census, it is difficult to enumerate the homeless population. Fortunately, the group of homeless people in Aruba is quite small. Although more than a few addicts live on Aruba, they normally live in so called 'choller houses'. The fact that they live in a 'house', whatever its condition, means that they are not homeless.

## *Living quarter*

A living quarter is a building (or part of a building), or any other construction, in which precisely one household resides. According to this definition, a building inhabited by two households, thus consists of two living quarters. Examples of living quarters are: a house, a trailer, a 'cuarto', etc. During the Census, only occupied buildings were enumerated. Vacant buildings were not included. They were separately canvassed, but are not included in this book of tables. Buildings under construction were only included if they were already occupied.

Two types of living quarters are distinguished:

- *A housing unit*: a separate and independent place of residence, used only by one non-collective household. This includes structures of various levels of permanence and quality.
- *Collective living quarters*: structural and independent places of residence intended for habitation by collective households. Collective living quarters usually have certain common facilities, such as cooking and toilet installations, baths, lounge rooms, or dormitories.

Housing units are divided into five categories:

- House: A building consisting of a suite of rooms and its accessories.
- Apartment: In Aruba, an apartment is considered to be either one of several housing units in a larger building, or an annex or small construction in the garden that is used by a separate household.
- Separate room is a house: A separate household can also occupy a room within a house. For instance, a live-in housemaid not belonging to the household of the employer may in some cases occupy a separate room in the house.
- Trailer/container: The most important characteristic of a trailer is that it is built on a chassis. The wheels of the trailer can be removed, but having a chassis on which wheels can be mounted is essential. In a few cases, containers normally used for the shipment of goods have been converted to serve as a small housing unit.
- Cuarto: A 'cuarto' usually has the following characteristics:
  - mostly of wood or metal sheets and not movable;
  - separated from the main building;
  - often with no facilities such as water and electricity;
  - mostly consisting of only one room, sometimes with an improvised section used as a kitchen or bedroom;
  - usually intended for temporary habitation.
- Condominium: A condominium is a relatively expensive apartment in an apartment building, most often inhabited by tourists.
- Other: Any kind of housing unit not included in one of the six previous categories.

Collective living quarters are divided into the following categories:

- Homes for the elderly: Homes for the elderly are set in permanent structures. In these institutions elderly persons live and are cared for.
- Orphanage: Orphanages houses not only orphan children, but also children who are not adequately cared for by their parent(s).
- Nursing home: A nursing home is an institution where personal and nursing care is provided for individuals who are unable to care for themselves because of a (chronic) health condition.
- Prison: A penitentiary or correctional institute that houses individuals who have committed a crime for which they have received a prison sentence.
- Other: The residual category for collective living quarters that do not conform to any of the above-mentioned types.

# C. Concepts and definitions

## *Population tables*

### *A. Tables dealing with general characteristics of the population*

#### *Place of residence*

The place of residence is the geographical place where an individual usually resides. The place of residence was classified according to the GAC-system. The tables report the place of residence by region and zone. Homeless individuals were classified according to the region and zone where they spend most of their time and spend the night.

#### *Nationality*

During the Census, all individuals enumerated were asked to report their nationality. Those who reported having more than one nationality were asked to indicate which one was most important to them. In the tables dealing with country of nationality, only a number of countries are stated separately. Those countries, of which their nationals do not constitute a significant number of individuals residing on Aruba, are included in regional rest categories.

### *B. Tables dealing with the living arrangements (in households and family nuclei) of the population*

#### *Reference person*

Tables dealing with the characteristics of the reference person are not included in this publication. During the 2010 Census, the term 'reference person' was not used in the same manner as was the previous Census. In the 2000 Census, the reference person was used to as a tool to help establish the relationships between the members of the household. However, during the 2010 Census, the relationship between the members of the household was determined on the basis of another set of questions completed for all members of the household. Therefore, enumerators were instructed to choose a reference person as a mere helpful tool in finding the person who could be the most helpful in completing the housing form, given that the owner of the living quarter or the one responsible for paying the rent is often the one who knows the most of the living quarter. Relationship to head of household was not asked in the 2010 Census.

### *C. Tables dealing with migration characteristics of the population*

#### *Native and foreign-born population*

‘Native population’ refers to persons born on Aruba, whereas ‘foreign born population’ refers to persons born outside of Aruba. It is important to note that country of birth is not necessarily equal to the country of nationality. In the tables dealing with country of birth, information is presented according to boundaries existing at the time of the Census. In addition, only a number of countries are stated separately. Those countries, of which the number of persons born in that country does not represent a significant number, are included into regional rest categories.

#### *Time of last settlement*

The time of last settlement refers to the month and year in which the person settled for the last time on Aruba, notwithstanding the duration of last settlement. If a person settled on Aruba and then left to settle elsewhere, but returned to the island to settle for a period of one year or longer, the time of last settlement is completed on the form.

#### *Duration of settlement*

The duration of settlement is the total number of years the person resided on the island, counting all the years since the person established himself or herself for the first time on the island until the Census moment, and excluding all the years when the person did not reside on Aruba. The numbers of years are expressed in completed years, one year thus meaning between one and two years.

### *D. Tables dealing with languages spoken in the household*

#### *Language*

During the 2010 Census, individuals were asked to indicate which language they *most often* spoke at home with other members of their household. The following languages were discerned: Papiamentu, Spanish, Dutch, English, and Chinese. A rest category ‘other language’ was added where enumerators could specify which language that was not on the list, was most often spoken by the individual. In addition, a category ‘Does not speak (as yet)’ was also added to provide for individuals unable to speak and for young babies. For individuals living alone, the language most often spoken was stated.

## *E. Tables dealing with health aspects of the population*

### *Difficulties*

The 2010 Census questionnaire, in accordance with new recommendations issued by the United Nations (2008), included a short set of 6 questions developed and tested by the Washington Group on Disability Statistics, which is a UN City Group that focuses on proposing international measures of disability. These questions focus on difficulties individuals experience in everyday life due to a physical or mental health problem. In this respect, health refers to a general condition of the body and mind with reference to soundness, vitality, and freedom from disease. ‘Problem’ refers to the individual’s perception of a departure from physical, mental or emotional wellbeing. This includes specific health problems, such as a disease or chronic condition, a missing limb or organ or any type of impairment. It also includes more vague disorders not always thought of as health-related, such as senility, depression, retardation, drug dependency, accidental injuries, etc.

In addition, for comparison purposes, the 2010 Census questionnaire included two questions on handicaps that were taken from the 2000 Census questionnaire. Firstly, individuals were asked to report whether they had a handicap and if ‘yes’, to state the type(s) of handicap. In this report only tables on disability are included. Data on handicaps will be presented in a subsequent specialized publication on disabilities.

## *F. Tables dealing with educational characteristics of the population*

### *School-attending population*

The school-attending population consists of those individuals who reported following an education. An educational program usually spans a period of more than one year. The program can be followed during the day or in the evening hours, and it is normally full-time. Those following one or more courses are therefore excluded. Contrary to the 2000 Census, where the school-attending population only included those individuals following regular educational programs that lead to an accredited diploma, the 2010 Census questionnaire was designed to also include those individuals following educational programs not (yet) officially accredited by the Aruban government. As such, children attending pre-primary schools, kindergartens, playschools, and day nurseries, are also considered to be attending school as are individuals attending, for example, educational programs (at the level of an accredited diploma) offered through the internet. Consequently the group of individuals ‘not-attending school’ is reduced to only those who at the Census moment were not following any type of educational program.

### *ISCED level category of program*

The International Standard Classification of Education (ISCED) is an instrument for presenting statistics on education developed by the UNESCO enabling national and international comparisons. It is important to note that the ISCED classification used during the 2010 Census differs in several respects to the one used during the 2000 Census. During the 2000 Census the ISCED 1976 was used, while for the purpose of the 2010 Census the ISCED coding of 1997 was in effect. The Department of Education of Aruba translated this new ISCED into the national educational system. However, the translated 1997 ISCED main level (coding) resulted in being too aggregated at the middle and higher levels of the existing educational system, making it difficult to properly reflect their differences. Therefore the Central Bureau of Statistics chose to present the statistics on education using the alternative national classification system in the selected tables presented in this publication.

The international 1997 ISCED system:

- Level 0: Pre-primary level of education is defined as the initial stage of organized instruction, designed primarily to introduce the very young children to a school-type environment, to provide a bridge between home and a school-based atmosphere. It usually starts at age 3, 4, or 5 (sometimes earlier), and lasts until age 6 or 7. School types at this level are: crèche, day nursery, playschool and kindergarten. In the 2010 Census children of all ages (including babies) are included in this category.
- Level 1: Primary level of education usually begins at age 5, 6 or 7 and generally lasts six years. School types at this level are: primary school, and special education primary school.
- Level 2: Lower secondary level of education. The lower secondary level of education generally continues the basic programs of the primary level, although teaching is typically more subject-focused. It usually starts at age 11 or 12 and lasts for 2 to 3 years. Programs are subdivided into:
- Level 2A; general programs (EPB 1-2, MAVO 1-2, HAVO/VWO 1-2, Middle School (ISA, IAH) grade 7-9);
  - Level 2C; technical/vocational programs (EPB apprentice education 1-3),
- Level 3: Upper secondary level of education corresponds to the final stage of secondary education. Instruction is often more organized along subject-matter lines. The entrance age to this level is typically 14, 15 or 16 and lasts about 3 years. At this level we find:
- Level 3A; general programs (HAVO 3-5, VWO 3-6, High School (ISA, IAH) grade 10-12);

- Level 3B; general programs (MAVO 3-4);
- Level 3B; technical/vocational programs (EPB doorstroom);
- Level 3C: technical/vocational programs (EPB-arbeidsmarkt, EPB-uitstroom)

Level 5: First stage of tertiary education. These programs have an educational content more advanced than those offered at level 3. Entry to these programs normally requires the successful completion of ISCED Level 3A or 3B. At this level we find:

- Level 5A; programs directed at obtaining first degrees (UA bachelor degree, IPA bachelor degree)
- Level 5A; programs directed at obtaining second degrees (UA master degree)
- Level 5B: programs directed at obtaining first qualifications (EPI-D, EPI-H associate degree, EPI-T, EPI-E)

Level 6: Second stage of tertiary education. This level is reserved for tertiary programs that lead directly to the award of an advanced qualification. The programs are devoted to advanced study and original research (UA, PhD degree).

Educational classification as used in tables related to the school-attending population (tables P-F.4. and P-I.12.):

VSO/KO: Pre-primary education and kindergarten (ISCED 0)

BO/SO: Primary education and special education (ISCED 1)

VO (1-2): Lower vocational education and academically oriented preparatory course to middle level professional education (ISCED 2) (ciclo basico EPB (onderbouw), ciclo basico MAVO, ciclo basico Colegio, de Schakel onderbouw, ISA (7-8) and Ibero American High School (7-8))

VO (3+): Academically oriented preparatory course to higher level professional education (ISCED 3) (EPB beroepsycclus (bovenbouw), MAVO (3-4), HAVO (3-5), VWO (3-6), ISA (9-12), Penn Foster and Ibero American High School (9-12), including evening classes)

MBO (AS): Vocational education, intermediate (associate) level (ISCED 5)

HBO (BA): Higher education, bachelor level (ISCED 5)

WO (MA/PhD): Higher education, masters and doctorate level (ISCED 5/6)

*Level of educational attainment*

All individuals 14 years and older who had followed and/or completed primary education were asked to report the highest diploma they obtained after primary school. The ISCED system was used for the classification of this information. In addition, questions were asked about the country where the highest diploma was obtained and the duration of the study.

It is important to take into account that, contrary to the 2000 Census, the 2010 Census questionnaire did not include questions on educational programs individuals followed without obtaining a diploma.

In this publication, only general categories of education are presented. Subsequent specialized reports will focus more in depth on educational attainment.

Educational classification as used in tables related to educational attainment of the population (tables P-F.6., P-F.7., P-F.8., P-H.3. and P-J.5.):

<BO:	Less than primary education (ISCED 0)
BO:	Primary education (ISCED 1)
LBO:	Lower vocational education (ISCED 2)
MAVO:	academically oriented preparatory course to middle level professional education (ISCED 2/3)
HAVO:	academically oriented preparatory course to middle level professional education (ISCED 2/3)
VWO:	academically oriented preparatory course to higher level professional education (ISCED 2/3)
MBO:	Vocational education, intermediate (associate) level (ISCED 5)
HBO:	Higher education, bachelor level (ISCED 5)
WO:	Higher education, masters and doctorate level (ISCED 5/6)

#### *After school care/program*

The 2010 Census questionnaire included two questions on ‘where’ and ‘with whom’ school attending children under the age of 18 stayed after school. The results can be compared to those obtained during the 2000 Census, taking into consideration that the single question used during the 2000 Census was split in two and the age limit was raised from individuals under the age of 14 to those under the age of 18. Furthermore, an additional question was included in the 2010 Census questionnaire on whether the after school care/program had to be paid for.

## *Literacy*

The 2010 Census questionnaire also included a question on literacy, which was asked to all persons 14 years and older. For comparability purposes, this question was identical to the one used in the 2000 Census questionnaire. A literate person was defined as a person who, with understanding, can read and write a simple statement on his/her everyday life. An illiterate person cannot, with understanding, both read and write such a simple statement.

## *G. Tables dealing with the marital status of the population*

### *Marital status*

Data was gathered on the legal status of each individual 14 years and older. Five categories were used:

- never married;
- married;
- divorced;
- legally separated;
- widowed.

There is a clear distinction between legally separated and divorced. 'Divorced' refers to a situation where the marriage has been terminated through a legal verdict. 'Legally separated' refers to the situation that, for one reason or another, the married couple is no longer able or willing to live together as mandated by the Civil Code (art. 154, par.1), and requests the court of law for a legal separation. By a legal separation, the spouses are exempted from their obligation to live together. However, the legal bond between the spouses remains unaltered. In the census tables both categories are placed together.

In addition, every individual who was ever-married was asked to report the month and year of his/her last marriage. Those who were divorced, legally separated, or widowed were asked to also report the month and year of the termination of their last marriage.

### *Living together on a durable basis*

During the 2010 Census, data was also gathered on persons living together on a durable basis, without being married to each other. Two questions on this topic were included in the household form in order to determine the status of these individuals.

## *H. Tables on the fertility of the female population*

The Census questionnaire included two questions on the number of live-born children a woman had from the onset of her reproductive life span up to the Census moment. It is important to note that only children who were alive at the moment of birth were counted.

## *I. Tables dealing with the economic activity status of the population*

### *Activity status*

The economically active population comprises all persons of either sex, who furnish the supply of labor for the production of economic goods and services, during a specified time-reference period. The time-reference period used in the 2010 Census was the week preceding the Census. Data was gathered on the activity status of individuals 14 years and older.

### *Economically active population*

The economically active population includes both persons in the civilian force and those serving in the armed forces. The civilian labor force encompasses both persons 'employed' and 'unemployed' during the week preceding the Population Census. The employment status was classified according to the International Standard Classification of Status in Employment, 2003 (ISCE-03) as follows:

**Employed:** The 'employed' comprise all persons 14 years of age and over who, during the week preceding the Census, were in the following categories:

#### *Paid employment:*

- 'At work': persons who worked for at least four hours for wage or salary, in cash or in kind.
- 'With job': persons who, having already worked in the present job, were temporarily not at work and had a formal attachment to that as evidenced by, for example, continuous receipt of wage or salary, an agreement on a date of return following the short duration of absence from their job, etc.

#### *Self-employment:*

- 'At work': persons who worked for at least four hours for profit or family gain, in cash or in kind.

- ‘With an enterprise but not at work’: persons with an enterprise, which may be a business enterprise, a farm or a service undertaking, who were temporarily not at work for any specific reason.

Unemployed: The ‘unemployed’ comprise all persons, 14 years of age and over who, during the week before the Census, complied with all three of the following conditions:

- ‘Without work’. i.e. were not in paid employment or self-employment,
- ‘Currently available for work’, i.e. able to start a new job within two weeks’ time.
- ‘Seeking work’, i.e. had taken specific steps to seek employment or self-employment. These specific steps may include: registration at a public or private employment agency; application to employers; checking at work sites; placing or answering newspaper advertisements; seeking assistance from friends and relatives; looking for land, machinery, or equipment to establish own enterprise; arranging for financial resources; applying for permits and licenses, etc.

#### *Not economically active population*

The not economically active population comprises the following functional categories:

**Homemakers:** Persons, of either sex, who are not employed or unemployed and who are engaged in household duties in their own home. Domestic employees, working for pay, are consequently classified as economically active.

**Students:** Persons of either sex, not economically active, who attend any regular educational institution, public or private, for systematic instruction at any level of education.

**Income recipients:** Persons of either sex, not economically active, who receive income from property or investments, interest, rents, royalties or pensions from former activities. Persons who retired early from the public sector using the so-called VUT arrangement (‘Vrijwillige Uitdientstreding’ – Voluntary Retirement) are also included in this category.

**Other non-actives:** Persons of either sex, not economically active, who are receiving aid or private support, and all other persons not falling into any of the previously mentioned categories, such as young persons not attending school and not economically active.

## *Occupation*

The occupation variable describes the kind of work a person did at the workplace (in their job), during the week preceding the Census, by the person employed. The International Standard Classification of Occupations, 2008 (ISCO-08) was used to code occupation. ISCO-08 is a classification system for organizing information on labor and jobs of the economically active population. ISCO-08 was published in 2008 and is the fourth iteration, following ISCO-58, ISCO-68 and ISCO-88.

It should be noted, however, that compared to ISCO-88 the names of some of the major groups in ISCO-08 have been slightly changed to more clearly specify their contents. In addition, some occupational groups have been moved from one major group to another.

ISCO-08 classifies jobs and defines it as a set of tasks and duties performed. An occupational category is a set of jobs whose main tasks and duties are characterized by a high degree of similarity.

The classification structure of ISCO-08 consists of four levels: major groups, sub-major groups, minor groups, and unit groups. The basic criteria used to classify the jobs are skill level and skill specialization required to competently perform the tasks and duties of the occupations.

The ISCO-08 divides occupations into 10 major groups:

- 0 Armed forces occupations
- 1 Managers
- 2 Professionals
- 3 Technicians and associate professionals
- 4 Clerical support workers
- 5 Service and sales workers
- 6 Skilled agricultural, forestry and fishery workers
- 7 Craft and related trades workers
- 8 Plant and machine operators, and assemblers
- 9 Elementary occupations

The tables in this publication only present the classification by major occupational group.

The following briefly outlines the ISCO-08 major groups and is meant to facilitate the interpretation of the tables.

- 0 Armed forces

Members of the armed forces are those personnel who are currently serving in the armed forces, including auxiliary services, whether on a voluntary or compulsory basis, and who are not free to accept civilian employment. It includes conscripts enrolled for military training or other services for a specified period.

## 1 Managers

Managers plan, direct, coordinate and evaluate the overall activities of enterprises, governments and other organizations, or of organizational units within them, and formulate and review their policies, laws, rules and regulations.

## 2 Professionals

Professionals increase the existing stock of knowledge, apply scientific or artistic concepts and theories, teach about the foregoing in a systematic manner, or engage in any combination of these activities. Competent performance in most occupations in this major group requires a high level of professional knowledge and experience in the fields of physical science including mathematics, engineering and technology, and life sciences including medical and health services, or social sciences and humanities. Supervision of other workers may be included.

## 3 Technicians and associate professionals

This major group requires technical knowledge and experience in one or more fields of physical and life sciences, social sciences and humanities. The main tasks consist of technical and related tasks connected with research and the application of scientific or artistic concepts and operational methods, and government or business regulations. Supervision of other workers may be included.

## 4 Clerical support workers

Clerical support workers record, organize, store, compute and retrieve information related, and perform a number of clerical duties in connection with money-handling operations, travel arrangements, requests for information, and appointments. Supervision of other workers may be included.

## 5 Service and sale workers

Service and sales workers provide personal and protective services related to travel, housekeeping, catering, personal care, or protection against fire and unlawful acts, or demonstrate and sell goods in wholesale or retail shops and similar establishments, as well as at stalls and on markets.

## 6 Skilled agricultural, forestry and fishery workers

Skilled agricultural, forestry and fishery workers grow and harvest field or tree and shrub crops, gather wild fruits and plants, breed, tend or hunt animals, produce a variety of animal husbandry products, cultivate, conserve and exploit forests, breed or catch fish and cultivate or gather other forms of aquatic life in order to provide food, shelter and income for themselves and their households.

## 7 Craft and related trades workers

Craft and related trades workers apply specific knowledge and skills in the fields to construct and maintain buildings, form metal, erect metal structures, set machine tools, or make, fit, maintain and repair machinery, equipment or tools, carry out printing work produce or process foodstuffs, textiles, or wooden, metal and other articles, including handicraft goods.

## 8 Plant and machine operators

Plant and machine operators, and assemblers operate and monitor industrial and agricultural machinery and equipment on the spot or by remote control, drive and operate trains, motor vehicles and mobile machinery and equipment, or assemble products from component parts according to strict specifications and procedures.

## 9 Elementary occupations

Elementary occupations involve the performance of simple and routine tasks which may require the use of handheld tools and considerable physical effort. Tasks usually include cleaning, restocking, basic maintenance; performing simple tasks in food preparation; delivering messages or goods; handling baggage and freight; stocking vending machines; collecting and sorting refuse; sweeping streets; performing simple farming, fishing, hunting or trapping tasks, performing simple tasks connected with mining, construction and manufacturing, providing various street services; guiding vehicles to transport passengers and goods; driving animal-drawn vehicles or machinery. Supervision of other workers may be included.

### *Branch of industry*

Branch of industry refers to the economic activity of the establishment where an employed person worked during the week preceding the Census. The Aruban Standard Industrial Classification of Economic Activities (ISICAruba2007-version 2) was used for the classification of industrial and business activities in Aruba, based on the International Standard Industrial Classification of Economic Activities Revision 3 of the United Nations.

The ISIC system uses a four-digit code (in some cases expanded to a five-digit code) to classify the economic activities of businesses and other economically active organizations in a country. The hierarchy in the classifications of the branch of industry is made up of divisions (2-digit codes), major groups (3-digit codes), and groups (4/5-digit codes). For analytical purposes, the divisions are grouped in 15 tabulation categories. A letter indicates each category.

ISIC Aruba 2007 categories are as follows:

- A. Agriculture, hunting and forestry
- B. Fishing
- C. Mining and quarrying
- D. Manufacturing
- E. Electricity, gas and water supply
- F. Construction
- G. Wholesale and retail trade
- H. Hotels and restaurants
- I. Transport, storage and communications
- J. Financial intermediation
- K. Real estate, renting and business activities
- L. Public administration and defense; social securities
- M. Education
- N. Health and social work
- O. Other community, social and personal service activities

#### *Status in employment*

Status in employment refers to the status of an economically active person with respect to his or her employment. Considered are the following:

**Employer:** An employer is a person who, as an owner, directs a business and employs three or more persons. It is important to note that a household is not a business. A housewife with three housemaids is not an employer. In addition, neither is the director of a foundation, incorporated business or government organization.

**Own account worker:**

A small employer is an independent, economically active person who gives employment to less than three persons.

**Small employer:**

An own account worker works on his/her own, without any employees. For instance, a carpenter who works on his own without any employees is an own account worker.

**Employee:** An employee is a person who works for a public or private employer and receives remuneration in wages, salary, commission, tips, piece-rates, or pay in kind. A distinction is made between an employee with a permanent job, and an employee with a temporary job. Employees with a permanent job are those

individuals who, by written or verbal contract, have been hired for a period of six months or longer. Employees with a temporary job include those employees who are hired for less than six months, with or without contract. On the 2010 Census questionnaire, a distinction was made between employees with a temporary job via a temp agency and not via a temp agency. A person with odd jobs for several days at a time would be classified under the latter category.

Unpaid family worker:

An unpaid family worker is usually a person who works without pay in an economic enterprise operated by a related person living in the same household.

Volunteer: Volunteers who manufacture a product or provide a service for a business are considered to be economically active.

Student/intern:

Students/interns who receive payment in cash or kind for the service they provide to an organization or business are considered to be economically active.

Other: This category consists of employees not elsewhere classified, for example, members of producers' cooperatives.

## *J. Tables on the income distribution of the population*

### *Income*

In the Population Census, income refers to gross income in the month preceding the Census. All data on income are presented in Aruban florins. The Aruban florin is pegged to the US Dollar at an exchange rate of 1.79 Afl. per 1 US\$. The income includes salaries and wages from employment, profits from businesses, pensions, welfare, alimony, etc.

It is important to note that the data on income is presented in an unstandardized form. For instance, no allowance was made for the effect of variation in the number of hours worked.

## *Housing Tables*

### *A. Tables on the type of living quarter*

For more information on the concepts: ‘housing unit’, ‘living quarter’, and ‘collective living quarter’ we refer to Section B: ‘The scope of the Census’.

### *B. Tables on the general characteristics of the living quarters*

#### *Tenure of the living quarter*

Tenure refers to the arrangement under which the household occupies the living quarters. The following categories are distinguished:

**Owner-occupant:** One (or more) member of the household is the owner of the housing unit. This category includes owners of housing units on which there is a mortgage. A further distinction was made between housing units on:

- Property land: i.e. the owner of the housing unit is also the owner of the land on which the housing unit is built.
- Leased land: i.e. the land on which the housing unit is built is leased by the owner of the housing unit from the government of Aruba for a period of 60 years.
- Rented land: i.e. the land on which the housing unit is built is rented by the owner of the housing unit from the government of Aruba for a period of no longer than five years. Despite regulations stipulated by the government that prohibit constructions of any kind on rented land, housing units have been built on rented land.

**Tenant:** The household rents the housing unit as the main tenant. A distinction was made between furnished, semi-furnished, and unfurnished housing units.

**Subtenancy:** The household rents the housing unit as a subtenant from another occupant who is the main tenant.

**Lived in for free by members of the household:**

In some cases, households can occupy a housing unit free of charge. For example, the use of the living quarter can be considered as part of the material benefits of a job, such as in the case of housemaids who are usually provided with free room and board as part of their remuneration.

### *Type of ownership*

Type of ownership should not be confused with tenure of the living quarter. Ownership refers to the type of proprietor of the living quarter where the household resides in case the living quarter is rented or lived in for free by members of the household. A distinction is made between housing units owned by:

- A private person: housing units owned by one or more private persons.
- A foundation: housing units owned by a foundation.
- A private company/business: housing units owned by a private company/business that provides the employees with a housing unit (as part of their remuneration).
- A bank: housing units owned by private banks. It is important to note that these do not include housing units on which there is a mortgage.
- The government: housing units owned by governmental organizations.

### *Rent*

The rent is the monthly amount paid (in Aruban florins) by the household for the use of the housing unit. In addition, the 2010 Census questionnaire included a question on the facilities that were included in the rent. The following facilities were discerned: electricity excluding that for the use of air-conditioning, electricity solely for the use of air-conditioning, water, gas, internet, cable television, and other facilities not previously mentioned (i.e. fees for the maintenance of the garden, pool, etc.).

### *Number of rooms*

A room is defined as a space in a housing unit or other living quarter that is enclosed by walls and covered by a roof. The room should be of a size large enough to hold an adult-sized bed (i.e. surface exceeding 4 m<sup>2</sup>). When totaling the number of rooms, bedrooms, dining rooms, living rooms, maid's rooms, kitchen, and enclosed patios were included. Excluded were (even if they had a surface exceeding 4 m<sup>2</sup>) bathrooms, toilets, hallways, verandas, porches, and rooms exclusively intended for practicing a profession.

### *Period of construction*

The period of construction referred to the period in which the housing unit was originally built. Any adaptations or reconstructions made to the housing unit after the period of construction were not considered.

### *Availability of cooking amenities*

The questionnaire included a question on the availability of cooking amenities in the housing unit: a kitchen sink, a stove, and a refrigerator.

### *Total surface of the housing unit*

The total surface of the housing unit was completed on the housing form. The surface of the housing unit is not to be confused with the surface of the premises. Only the surface of the construction that comprised the housing unit was measured. When household members did not provide the surface of the housing unit, an estimation was made. When calculating the surface of the housing unit, all rooms, bathrooms and toilets were included. Garages, open porches, patios and rooms for practicing a profession were excluded.

### *Total surface of the land the housing unit was built on*

The 2010 Census questionnaire also included a question on the total surface of the land the housing unit was built on. It is important to note that any other land household members owned or rented was not included. When household members could not provide the information requested, an estimation was made.

## *C. Tables on some construction aspects of the living quarters*

### *Material used to build exterior walls and roofing*

Where more than one building material was used for the construction of the exterior walls and/or roof, the material that was predominantly used was stated.

### *Quality of construction and maintenance*

Quality of construction and maintenance of the living quarters stands for the overall condition of the building or part of the building where the living quarters were located. The enumerator evaluated the quality of construction and maintenance of the living quarters, by means of a question they completed on five major elements of the living quarters: the roof, the walls, the floor, the ceiling and the windows, doors, and frames.

The condition of every single element was determined to be either:

- Good: The element was in a good condition (no defects)
- Moderate: The element showed deficiencies that could be repaired by normal maintenance
- Poor: The element showed major deficiencies that could not be repaired by maintenance
- Very poor: Significant parts of the element showed very serious deficiencies that could not be repaired and had to be replaced.

In this manner (and by providing the enumerators with good instruction), we tried to obtain an objective evaluation of the condition of the living quarters, without personal preferences and aesthetical norms of enumerators playing a major role.

#### *D. Tables dealing with sanitary facilities of the living quarters*

##### *Bathrooms and toilets*

Where different households use the same bathroom or toilet, the facility was considered to belong to the household occupying the housing unit of the largest surface. Information was also collected on the drainage system used.

##### *Water use*

Information was also collected on the use of water from a number of sources to water plants, etc. The sources included were: rainwater tank, (rainwater) well, septic tank, synthetic tank, or dam (open water).

#### *E. Tables dealing with car ownership of members of the household*

##### *Automobile ownership*

Automobile ownership refers to the personal possession of a (running) car by members of the household. Thus, i.e. rented vehicles, commercial vehicles and official vehicles were not considered in the enumeration.

## *F. Tables dealing with goods, facilities and inconveniences*

### *Swimming pool*

Only permanent, not removable swimming pools were enumerated. If the swimming pool was used by more than one household, it was considered to belong to only one of those households.

### *Utilities*

Information was gathered about whether the household was connected to the electricity net, the water supplier, and/or the telephone and cable television providers.

### *Internet*

Data was gathered on the internet access of household members in the housing unit via cellular phone and/or computer/laptop. Household members with access to the internet via a computer/laptop were asked to report the type of internet connection.

### *Computers, cellular phones and air-conditioning units*

Households were asked to report the number of functioning computers (and laptops), cellular phones, and air-conditioning units present in the housing unit.

### *Inconveniences*

Household members were asked to indicate whether they experienced the following inconveniences in the neighborhood of their housing unit:

- Dust (due to excavations, dusty roads)
- Air pollution (stench, exhaust fumes, soot)
- Noise (caused by airplanes flying over, traffic, neighborhood nuisance)
- Traffic (unsafe traffic, heavy traffic)
- Flooding after heavy rainfall
- Crime/criminal activities
- Litter and accompanying stench (dumped litter, activities in the neighborhood)
- Car wrecks
- Stray dogs

# D. Accuracy of the 2010 Census

## *Errors affecting the accuracy of the Census*

It is impossible to conduct a perfect Population and Housing Census. Errors are inevitable and can occur at different stages of the project. It is the responsibility of the census taker to minimize the number and impact of errors occurring. This chapter aims at providing a brief insight into these errors and in the way they were dealt with in order to minimize their influence on the quality of the final results.

Errors affecting the accuracy of the Census can be divided into two types:

*Errors of coverage:* i.e. errors in the total count of the units of enumeration, caused by cases being ‘missed’ or cases being mistakenly counted because of either duplication or erroneous inclusion.

*Errors of content:* i.e. errors in the characteristics of the persons (or other units of enumeration) recorded during the Census.

To compensate for these errors, the following adjustments were made:

- errors in coverage were compensated for by inflating the Census figures to offset a minor undercount.
- content errors were dealt with by extensively and systematically checking the raw data and correcting the errors detected.

### *Errors of coverage*

Errors of coverage arise from different problems that occur during the fieldwork of a Census, among others: defective field operations, carelessness of enumerators, misunderstandings, absenteeism, lack of cooperation from the individuals to be enumerated, mapping errors, etc.

A distinction is made between errors of coverage due to:

- omissions
- duplications, and/or
- erroneous inclusions

#### *Omissions*

Omissions result from either entire households being overlooked, or one or more individuals within enumerated households being missed. To minimize the omission of living quarters and households, a number of measures were taken before and during the enumeration period. Firstly, all enumerated living quarters were identified by a large 2010 sticker that was placed on a visible spot on the road-side of the building where the living quarter was situated. In this manner, living quarters that were not identified with a sticker were visited during the post-enumeration period. Also, enumerators had to keep track of their work on a separate progress form. Addresses that were not counted during the census were visited again during the post-census enumeration.

Secondly, enumerators were provided with detailed maps of their enumeration block to ensure an optimal count of all the living quarters on the map. In addition, enumerators were instructed to indicate on the map which living quarters they had enumerated and which ones they had not, including those they had added to the map. Thirdly, head enumerators, assistants, and fieldwork personnel from the CBS were instructed to conduct spot checks in the enumeration areas assigned to them to ensure an optimal coverage of the area. Finally, to avoid the undercount of specific groups (i.e. individuals living in hotels, institutions, homeless persons and marginal households), a special fieldwork team was created to enumerate these individuals.

However, a group that always poses a great risk to be ‘missed’ are the undocumented (‘illegal’) migrants. The magnitude of the undercount of this group is not easily determined, but there is reason to believe that it is rather small. Undocumented individuals often do not comply with the definition of individuals to be enumerated, given that they often do not stay on Aruba for more than a year.

### *Duplications*

Duplication errors occur when living quarters, households, and/or individuals are included more than once in the Census enumeration. These errors may occur during the enumeration period and/or during the data handling phase. A number of measures were taken to minimize these errors. Firstly, as mentioned earlier, all enumerated living quarters were identified with a sticker to avoid as much as possible omissions and duplications. Secondly, enumerators and head enumerators were provided with detailed maps of their enumeration block/area where they could keep track of the enumerated living quarters. Thirdly, each enumerator had to complete a progress form with detailed information on every household enumerated. On separate forms enumerators had to indicate which addresses were missed during their field work and which did not have to be counted (empty houses, commercial buildings, tourist houses..) The progress form was extensively checked for errors and inconsistencies during the enumeration period. Finally, strict procedural rules were established to avoid duplication during data entry and all data files were systematically checked by computer for the occurrence of duplicate records.

### *Erroneous inclusions*

An erroneous inclusion is an error of coverage formed by the enumeration of an individual who does not comply with the criteria of those to be enumerated during a Census, such as tourists, individuals who had died before the Census moment (September 29 2010, midnight), babies who were born after the Census moment, etc.

A few cases of erroneous inclusions were detected during the data editing process. These cases mainly concerned babies born after the Census moment who were mistakenly enumerated, particularly during the Post-Census enumeration period.

### *Correction for under coverage*

All censuses in the world have to deal with the problem of under coverage. After the 2010 Census, an elaborate analysis was performed to establish how many households and persons were missed during the Census field work. This analysis was made on the basis of the progress forms completed by each enumerator. Census data was also checked with other administrative sources. The analysis of under coverage revealed that 8.2 percent of the population had not been counted which is higher than in the 2000 Census when 5 percent of the population was not enumerated. All tables presented in this report have been augmented with a factor of 1.082 to compensate for under coverage.

### *Errors of content*

Errors of content can result from erroneous or inconsistent reporting of characteristics by enumerated individuals, errors committed by enumerators when obtaining or recording the required information, and errors introduced during the administrative handling and processing of the data gathered.

Different measures were taken to detect and correct errors of content. During the enumeration period, head enumerators and their assistant were in charge of checking the forms completed by the enumerators for errors of content. These errors had to be corrected by the enumerators and if necessary, they had to return to the enumerated individual/household to obtain the correct information.

During the data handling and data processing period, all documents were systematically checked and scanned by means of the Eyes and Hands scanning-software. After scanning the forms, a team of verifiers was in charge of checking the way the computer interpreted marks and characters, and CBS personnel specialized in collecting and disseminating data on education, employment, cartography, and branch of industry were in charge of coding the information gathered on these topics. Computer aided coding was used to facilitate this process.

# Selected Tables

## *Selected tables*

A set of selected tables is presented on the following pages. For a better overview, the tables were divided into two subsets:

*Population Tables*      tables dealing with individual characteristics of the population

*Housing Tables*        tables focussing on the housing conditions of the population

The modules into which the tables are divided coincide with the modules on the Census questionnaires. Thus, each Census table belongs to one of the following categories:

### Population tables:

- A. Tables with general characteristics of the population
- B. Tables dealing with the living arrangements (in households and family nuclei) of the population
- C. Tables dealing with migration characteristics of the population
- D. Tables dealing with languages spoken in the households
- E. Tables dealing with health aspects of the population
- F. Tables dealing with educational characteristics of the population
- G. Tables dealing with the marital status of the population
- H. Tables on the fertility of the female population
- I. Tables dealing with the economic activity of the population
- J. Tables on the income distribution of the population

### Housing Tables:

- A. Tables on the type of living quarters
- B. Tables with general characteristics of living quarters
- C. Tables on some construction aspects of living quarters
- D. Tables dealing with sanitary facilities of the living quarters
- E. Tables dealing with car ownership of occupants of the living quarters
- F. Tables dealing with goods, facilities and inconveniences around the living quarters

# Population Tables

**Table P-A.1. Population by single years of age and sex**

Age	Absolute			Relative		
	Male	Female	Total	Male	Female	Total
0	560	557	1,117	0.6	0.5	1.1
1	666	625	1,290	0.7	0.6	1.3
2	659	638	1,297	0.6	0.6	1.3

# Bibliography

# Glossary

**Activity status** classifies the population into those economically active and not economically active. Activity status is the current or usual relationship of each person to economic activity during the week preceding the Census. Data on activity status is restricted to persons 14 years of age and over.

**Children ever born** refers to the total number of live-born children a woman has had from the onset of her reproductive life span up to the Census moment. Only children who were alive at the moment of birth are counted.

**Collective household** is defined as a household of more than ten persons without any family relation to one another.

**Collective living quarters** are structural and independent places of abode, intended for habitation by collective households. Collective living quarters have certain common facilities, such as cooking and toilet installations, baths, lounge rooms, or dormitories.

**Composite household** consist of persons who are not all related to one another.

**Consensual bonds** are de facto unions without any formal marriage bond.

**Consensual family nucleus** refers to a couple, not married to one another, with or without children (never married child(ren) and not living together with a partner), and living together on a durable basis.

**De jure population** refers to the total of all usual residents

**De facto population** refers to the total of all persons present at a certain time.

**Divorced** refers to the situation where the marriage has been terminated through a legal verdict.

**Duration of settlement** is the interval of time between the Census moment and the date the person settled himself or herself for the first time on the island. The duration of time is expressed in completed years. One year thus means between one and two years.

**Economically active population** comprises all persons of either sex who furnish the supply of labor for the production of economic goods and services during the week preceding the Census. It includes both economically active persons in the civilian labor force and those serving in the armed forces. The civilian labor force encompasses both persons 'employed' and 'unemployed'.

**Employed population** comprises all persons (irrespective of their status as employer, employee, etc.), including unpaid family workers, 14 years of age and over, who worked during the week preceding the Census moment or who were temporarily absent from their work because of illness or injury, industrial dispute, vacation or other leave of absence,

absence without leave, or temporary disorganization of work, owing to bad weather, mechanical breakdown or the like.

**Employee** is a person who works for a public or private employer and receives remuneration in wages, salary, commission, tips, piece-rates, or pay in kind. A distinction is made between 'Employee with a permanent job' and 'Employee with a temporary job'. 'Employees with a permanent job' consist of persons who, by written or verbal contract, have been hired for a period of six months or longer. 'Employees with a temporary job' include those employees who are hired for less than six months, with or without a contract. A person who does odd jobs for several days at a time is also classified under this category.

**Employer** is a person who, as an owner, directs a business and employs three or more persons. It is important to mention that a household is not a business. A housewife with three housemaids is not an employer. Director of a foundations, incorporated businesses, or governmental organizations are also not employers.

**Extended household** consists of persons related to one another, but not comprising a nuclear household

**Foreign-born population** consists of persons not born on Aruba

**Homeless household** is defined as a household without shelter that would fall within the scope of living quarters.

**Household** consists of persons who share a common room in a housing unit and share their meals. It is important to take into account that a live-in maid sometimes belongs to the households where she works and sometimes not. It all depends on whether or not the housemaid has her own living quarters where she lives, separately and almost independently, after her daily work.

**Housing unit** is a separate and independent place of abode used only by one non-collective household. This includes structures of varying levels of permanence and quality.

**Income** refers to the gross income the person received in the month preceding the Census. All data on income are presented in Aruban florins. The Aruban florin is pegged to the US dollar at an exchange rate of 1.79 Afl. per 1 US\$. The income includes salaries and wages from employment, profits from businesses, pension, welfare, alimony, etc.

**ISCED** is the International Standard Classification of Education. It is an instrument for presenting statistics on education. ISCED is basically a three-stage classification system, providing successive subdivisions from level of education to field of study to program group. The ISCED level of program incorporates six categories.

**Level 0** is the pre-primary level of education and usually starts at age 3, 4, or 5 (sometimes earlier), and lasts until age 6 or 7. School types at this level are: crèche, day nursery, playschool, and kindergarten.

**Level 1** is the primary level of education and usually begins at age 5, 6, or 7 and generally lasts six years. School types at this level are: primary school, and special education primary school.

**Level 2** is the lower secondary level of education and usually starts at age 11 or 12 and lasts for 2 to 3 years. Programs are subdivided into Level 2A (general program: EPB 1-2, MAVO 1-2, HAVO/VWO 1-2, Middle School (ISA, IAH) grade 7-9) and Level 2C (technical/vocational programs: EPB apprentice education 1-3),

**Level 3** is the upper secondary level of education and corresponds to the final stage of secondary education. The entrance age to this level is typically 14, 15 or 16 and lasts about 3 years. At this level we find: Level 3A (general programs: HAVO 3-5, VWO 3-6, High School (ISA, IAH) grade 10-12), Level 3B (general programs: MAVO 3-4), Level 3B (technical/vocational programs: EPB doorstroom), and Level 3C (technical/vocational programs: EPB-arbeidsmarkt, EPB-uitstroom)

**Level 5** is the first stage of tertiary education. Entry to these programs normally requires the successful completion of ISCED Level 3A or 3B. At this level we find: Level 5A (programs directed at obtaining first degrees: UA bachelor degree, IPA bachelor degree), Level 5A (programs directed at obtaining second degrees: UA master degree), Level 5B (programs directed at obtaining first qualifications: EPI-D, EPI-H associate degree, EPI-T, EPI-E)

**Level 6** is the second stage of tertiary education. This level is reserved for tertiary programs that lead directly to the award of an advanced qualification. The programs are devoted to advanced study and original research (UA, PhD degree).

**ISCO** is the International Standard Classification of Occupations. It is a classification system for organizing information on labor and jobs of the economically active population. The classification structure of ISCO-08 consists of four levels: major groups, sub-major groups, minor groups, and unit groups. The 10 major groups are:

**0 Armed forces** are those personnel who are currently serving in the armed forces, including auxiliary services, whether on a voluntary or compulsory basis, and who are not free to accept civilian employment. It includes conscripts enrolled for military training or other services for a specified period.

**1 Managers** plan, direct, coordinate and evaluate the overall activities of enterprises, governments and other organizations, or of organizational units within them, and formulate and review their policies, laws, rules and regulations.

2 Professionals increase the existing stock of knowledge, apply scientific or artistic concepts and theories, teach about the foregoing in a systematic manner, or engage in any combination of these activities. Competent performance in most occupations in this major group requires a high level of professional knowledge and experience in the fields of physical science including mathematics, engineering and technology, and life sciences including medical and health services, or social sciences and humanities. Supervision of other workers may be included.

3 Technicians and associate professionals require technical knowledge and experience in one or more fields of physical and life sciences, social sciences and humanities. The main tasks consist of technical and related tasks connected with research and the application of scientific or artistic concepts and operational methods, and government or business regulations. Supervision of other workers may be included.

4 Clerical support workers record, organize, store, compute and retrieve information related, and perform a number of clerical duties in connection with money-handling operations, travel arrangements, requests for information, and appointments. Supervision of other workers may be included.

5 Service and sale workers provide personal and protective services related to travel, housekeeping, catering, personal care, or protection against fire and unlawful acts, or demonstrate and sell goods in wholesale or retail shops and similar establishments, as well as at stalls and on markets.

6 Skilled agricultural, forestry and fishery workers grow and harvest field or tree and shrub crops, gather wild fruits and plants, breed, tend or hunt animals, produce a variety of animal husbandry products, cultivate, conserve and exploit forests, breed or catch fish and cultivate or gather other forms of aquatic life in order to provide food, shelter and income for themselves and their households.

7 Craft and related trades workers apply specific knowledge and skills in the fields to construct and maintain buildings, form metal, erect metal structures, set machine tools, or make, fit, maintain and repair machinery, equipment or tools, carry out printing work produce or process foodstuffs, textiles, or wooden, metal and other articles, including handicraft goods.

8 Plant and machine operators operate and monitor industrial and agricultural machinery and equipment on the spot or by remote control, drive and operate trains, motor vehicles and mobile machinery and equipment, or assemble products from component parts according to strict specifications and procedures.

9 Elementary occupations involve the performance of simple and routine tasks which may require the use of handheld tools and considerable physical effort. Tasks usually include cleaning, restocking, basic maintenance; performing simple tasks in food

preparation; delivering messages or goods; handling baggage and freight; stocking vending machines; collecting and sorting refuse; sweeping streets; performing simple farming, fishing, hunting or trapping tasks, performing simple tasks connected with mining, construction and manufacturing, providing various street services; guiding vehicles to transport passengers and goods; driving animal-drawn vehicles or machinery. Supervision of other workers may be included.

ISIC is the International Standard Industrial Classification of Economic Activities Revision 3 of the United Nations on which the Aruban Standard Industrial Classification of Economic Activities (ISICAruba2007-version 2) was based. The hierarchy in the classifications of the branch of industry is made up of divisions (2-digit codes), major groups (3-digit codes), and groups (4/5-digit codes). For analytical purposes, the divisions are grouped in 15 tabulation categories. A letter indicates each category:

- A. Agriculture, hunting and forestry
- B. Fishing
- C. Mining and quarrying
- D. Manufacturing
- E. Electricity, gas and water supply
- F. Construction
- G. Wholesale and retail trade
- H. Hotels and restaurants
- I. Transport, storage and communications
- J. Financial intermediation
- K. Real estate, renting and business activities
- L. Public administration and defence; social securities
- M. Education
- N. Health and social work
- O. Other community, social and personal service activities

**Language** refers to the language most often spoken by individuals in their household.

**Legally separated spouses** are exempted from their obligation to live together as described in the Civil Code (art. 154, par. 1). Spouses who may no longer be able to live together can request the court of law for a legal separation. By a legal separation, the legal bond between the spouses remains unaltered.

**Level of educational attainment** refers to the highest diploma obtained by an individual. The ISCED system was used for the classification of this information.

**Living quarters** consist of a building (or part of a building), or any other construction, in which precisely one household resides.

**Living together on a durable basis** is a consensual bond between two persons. These persons may or may not be married to one another.

Marital status is the legal status of the individual.

Native population refers to persons born on Aruba.

Non-collective household can either be a one person household, a nuclear household, an extended household or a composite household.

Not economically active individuals include homemakers, students, income recipients, etc.

Nuclear household is defined as a household consisting entirely of a single conjugal family nucleus.

Own account worker/small employer is an independent, economically active person who provides employment to less than three persons. For instance, a carpenter who works on his own without any employees, is an own account worker.

Place of residence is the geographical place where the enumerated person usually resides.

School-attending population consists of those persons who are following an education program. The program spans a period of more than a year and can be followed during the day or in the evening hours. It is normally considered to be full-time. A few examples of educational programs on Aruba are: primary school, MAVO, International School, Ibero-American High School, VWO, IPA, EPB, EPI, University of Aruba, Police school. Due to a high interest of Census data users about children attending kindergartens, playschools, and day nurseries, children attending pre-primary schools were also considered to follow an education.

Sociological family nucleus consists of both legally married individuals (with or without children), as well as of persons living together on a durable basis without being married to one another (with or without children).

Status of employment refers to the status of an economically active person with respect to his or her employment. A distinction is made between employers, own account workers/small employer, employees with a permanent job, employees with a temporary job, unpaid family workers, students or interns, volunteers, or otherwise employed individuals.

Tenure of household refers to the arrangement under which the household occupies the living quarters.

Type of ownership refers to the type of proprietor of the living quarter where the household resides.

Unattached person is someone who does not belong to a family nucleus.

Unemployed population refers to all persons 14 years of age and over, who were not working during the week preceding the Census, but were seeking work for pay or profit and were available to start working within two weeks' time, including those who had never worked.

Unpaid family worker is usually a person who works without pay in an economic enterprise operated by a related person, usually living in the same household.
